AppITop Marketing Oracle Apps Extender Worldwide

05/30/03--AppITop Solutions says it has made its ASL*Form, launched in the UK last summer, available worldwide. The vendor says ASL*Form enables any business using Oracle Applications to create add-on solutions that are 100% integrated with the exact same look and feel as the rest of the system. Almost anybody of any skill level can now build solutions in minutes, AppITop says.

Quick Poll

How would you characterize your integration efforts?

- Tactically based, project by project
- We have a strategic plan
- We are building towards an enterprise architecture one project at a time
- We have an

With ASL*Form, notes AppITop, certain types of project are no longer governed by time and budgetary constraints. Whether enterprises are developing a new bolt-on mini-application, simplifying an existing overcomplicated, slow and hard to use form or providing an on-screen interactive alternative to a printed report, ASL*Form is "up to the task," its maker asserts. A solution that might take several weeks or months to develop using traditional methods may literally take only a few hours or even minutes using ASL*Form, AppITop points out.

The company says it is "committed to ensuring that the whole of the Oracle E-Business Suite world has the opportunity of using our products to further enhance and extend their applications in very intelligent ways. ... Businesses across the globe using or currently implementing Oracle E-Business Suite can vastly enhance productivity, improve efficiency and save time and money by using our innovative products."

ASL*Form is available for Oracle Applications 11.0.3 and Oracle E-Business Suite 11i.
